

SAKTHI FOUNDATION

[Montessori integrated Uni5]

NAMMA VEEDU MONTESSORI HOUSE OF INFANTS and CHILDREN [8 Months – 6 years]

Folding of napkins is being performed by our 4.5 year old child [30 minutes of concentration]

WHY I AM RESTLESS BECOME INDISCIPLINED, DISTRACTED AND IRRITATED TO ALL?

“The monkey which used his limbs to catch hold of the long branch of the old mango tree has initiated the process of self – creation that is to evolve himself as the very first human. The child who is allowed to use his hands to his best by the mother creates himself as the superior of all. Hands are the tools given only to the humans to perform the exercises in every stage of life to self – construct him. If the human baby’s hands are chained with robes of love, chains of compassion and over alertness, the inner strength will be damaged and later the child will be expecting only others for every help. The chained hands of the human child trigger its mind to wander and there comes the disturbances and unacceptable behavior of humans. Allow the child to explore in body, mind, intellect levels and also allow doing all actions which are harmless and safe with the sense of freedom” Dr.Montessori [BBC talk in 1945]

Medically observed human phases of development:

[In each phase the child changes physically we all know, but mentally and emotionally? Try to understand and assist them]

Pregnancy – birth, Mother’s thoughts and actions creates the child’s personality.

0 – 3 years [infancy]

3 – 6 years [CHILDHOOD] [child constructs her inner personality just by observations, explorations, experiments, witnessing, listening, watching, no sense of judgments, please do not teach what is good and wrong, better perform or live] Completion of nervous system, initiation of all senses happens in this phase. The development of language is the most important feature along with logical skills. Most of the Montessori schools function for this level because this age is the most important age for human personality development.

6 – 9 years [phase of abstraction of all concepts, learning, values, ethics, can be judgmental]

9 – 12 years [second child hood **most careful stage**, attention has to be given]

12 – 18 adult.

With regards

Dr.Madeswaran.M
